

PwC Technology Consultant Intern

Internship Acceptance Guide

A complete guide for aspiring interns

Student's Experience & Suggestions

Rishika Sur

1 Information Technology

Name	Rishika Sur
Department	Information Technology
Year of Grad.	2027

Experience

Round 1: Technical Interview (15–20 minutes)

I was asked situational questions. Since my interviewer worked in Support, questions were mostly based on alerting systems and how to handle complaints.

Question 1: There are a few lifts in a tall building, and you are the system manager. How do you implement an alerting system based on priority and what actions would you take? I explained the plan for the system and mentioned what scenarios would be associated with what priorities.

Question 2: How would you solve the problem where a business client raises a complaint that their website (which we helped create/manage) was working slowly, with no extra details given? I explained how I would first identify where the slowness was occurring and then focus on the why. In answering this, I mentioned APIs, and was then asked to explain them.

Lastly, he asked if I knew any alerting system.

He ended the interview by asking a few basic questions like hobbies, extracurriculars, and where I wanted to see myself in 5 years.

Note: While I was not asked questions directly from the curriculum in the first round, other students were asked simple SQL queries and asked to write down basic sorting algorithms.

Round 2: Partner Round (15–20 minutes)

This round was totally resume-based for me. I was asked to describe the 4 fundamentals of OOP and about a project from my resume. He asked questions like:

- Why PwC?

- What would you do if you didn't get an internship there?

Note: Some students in this round were also asked puzzles and brain teasers.

Round 3: HR Round (7–10 minutes)

I was asked to show my grade cards for all 4 semesters. The interviewer confirmed that I was open to travel, had a passport, and re-iterated the stipend. Friendly questions about my family members and hobbies were also asked.

In each round the interviewers gave me the opportunity to ask them questions, so I asked about what I could expect to do as an intern if selected and about the work culture at PwC.

Preparation Tips

DSA is a must for all tech companies (though the Online Assessment for PwC was pure aptitude). Practice solving problems with a timer on. Solve basic arithmetic and geometry problems as fast as you can.

Main topics on which OA questions were based: ratio/proportion and interest.

Study your resume thoroughly — treat it like a subject of its own. Your resume is their first impression of you. Know your projects well and keep some mental notes on unique features and features you haven't added (and why). Follow-up questions can be asked.

Expect situational questions — not everything will be curriculum-aligned. Also stay calm and confident during the interview, at least portray that you are.

Speak slowly and articulate your thoughts clearly. If you do not agree with an interviewer's point, first think, then rearrange your thoughts in a logical manner. They do not expect you to agree with everything — think of it as a discussion, not a competition or debate to win.

Ask relevant questions and try to make the interviewers feel good about themselves and their work.

Additional Notes

Do not constantly ask for updates — once or twice is fine. There was nearly an hour waiting between the first two rounds. If you get rejected after a round they will let you know; you won't have to sit the whole day. Do not pester them.

Also, be there on time. Arriving late might kick you out before you even have the chance to prove yourself.
