Experience

1st round :

The interview was conducted online via Microsoft Teams, but we had to give it from Teqip. The interviewer started by introducing himself and then asked me to introduce myself and talk a bit about what I've worked with and what I have experience in (if any). I introduced myself with the basics, followed by brief explanations of my projects and the tech stacks I've used in them. Then the Interviewer continued with a few questions about the project and moved on to CS fundamentals. He asked multiple questions on OOPS, DBMS, Java, DSA, and CN. He followed up on many questions with further questions based on my answers and also asked some out-of-the-box questions in between. He also asked me to write down some queries and code snippets on a piece of paper and show them to him through the camera. Then he ended the interview after asking me if I had any questions for him, to which I responded with a couple of questions about the work culture and about his feedback on what I could try to work on as an interviewee.

I was called in for the 2nd round about 15 mins after the 1st round.

2nd round:

This was a proper in-person interview for me. The interviewer started by introducing himself and asked me to introduce myself and my experience in the domain. He asked for much basic information like my background, where I went to school, what subjects I loved in school and why I chose that stream, and how I ended up in JU. Then he started asking questions on CS fundamentals (OOPS, DBMS, DSA, Java, CN). Again, there were multiple follow-up questions based on my answers and some out-of-the-box questions. I was also asked to write down queries and code snippets on paper and show them. After a lot of time on these, he asked me a critical thinking question that I could not solve immediately, and I was given some time to think, and I could ask him as many questions as I wanted to clarify doubts. He gave me a hint after some time, and I solved it then. Again, the interviewer asked me if I had any further questions for him, and I kind of asked similar questions to those in the 1st round, after answering which the interview ended.

We were informed that we have to come back the next morning for a 3rd round (HR round).

3rd round (HR):

The interview was an in-person interview again. The interviewer started by introducing himself and again asked me to introduce myself a bit. He asked questions about my background, like where my hometown is, where I went to school, my class 10 and 12 boards percentages, my current CGPA considering all 4 semesters, and if I have any active backlogs. He also asked me how I ended up in JU and why I chose JU. Then he asked me why I want to work with Wells Fargo, and why they should hire me. He asked me a bit about my knowledge of the company and its values. Then he asked me about my family background and if I am comfortable with relocating for this position in any location they offer to me. After all this, he asked me if I am going to wait till the end until results are declared or whether I'll leave for a class or something. The interview ended here.

The interviewers were very friendly, and the overall experience was very nice. All the interviews felt very conversational, and the interviewers were also very supportive and amenable to talk to.

Prep. Tips

Prepare all CS fundamental topics thoroughly and have knowledge about your projects and the tech stacks used. Be ready to face questions beyond your knowledge and know how to react to them.

Additional Notes

Answer confidently and try to keep the interview conversational. Ask for hints or think out loud when you face a question that you don't know the answer to. Let the interviewer know about your strong points if you can, through simple conversation.

Computer Science & Engineering

Name	Soham Mandal
Department	Computer Science & Engineering
Year of Grad.	2027

Experience

OA : Verbal english questions, business analytics (basics), coding 3 questions. Questions based on luck. Varies from person to person. I received a LeetCode Medium Hard problem. Questions range from Easy Medium to Medium Hard.

TR1: Easy. Questions based on resume (overall). Some basic dsa questions like tree traversal.

TR2: Medium Hard. You should know everything about what you have written in resume. Remember the graph algorithms. Approach very important. You might not know everything but say what you know.

HR: Why Wells Fargo? Basic family background. Extracurriculars. Why that particular extracurricular? Why should you be taken?

Prep. Tips

Know everything about resume. Business analytics only for OA. Do some hard DSA for OA. Graphs part very important

Additional Notes

Best of Luck !!!!!

Information Technology

Name	Neelim Goswami
Department	Information Technology
Year of Grad.	2027

Experience

Online Assessment :

Section 1 (1 medium DSA) :

I got a direct problem based on implementation of dijkstra

Section 2 :

Basic english language and comprehension questions based on a big passage

Section 3 :

Finance questions included questions on set theory, interpretation of candle sticks and other plots (I guessed a few of them)

Section 4 :

Two easy coding problems one based on basics of strings like taking input in one line and calculating their frequency, and another was just printing unique elements in an array.

Interview:

Round 1 :

The interview started with some basic introductions. Got basic questions on core CS like sql query to display the count of students in a particular department, and the four pillars of oops, and which layers of the OSI model we need to worry about when developing an application. I was not familiar with OS and had said so to the interviewer. Very basic DSA was asked like reversing a string, counting set bits in a number, explaining the difference between stack and queue, dfs and bfs, sorting algos.

Round 2 :

This round also started with some basic introductions. Mostly talked about my area of interest and talked a bit about compilers and ai agents(of which i had consumer level knowledge). Was asked some basic questions about stack and heap memory and making a linked list. Most of the interview was a chill conversation mostly about my interests and what i wanted to work on.

HR Round :

The HR interview started with some basic introductions. Standard behavioral questions like are you comfortable relocating? Why should we hire you? Why Wells Fargo? How was the previous rounds? Ended the interview by having a conversation about traffic in Bangalore compared to Kolkata for the final minutes.

I spent most of the time in all three rounds having conversations with the interviewers and cracking jokes, so having good conversation skills helps a lot, no need for very over the top english skills.

I was not asked questions about projects I listed on the resume but most of my friends were.

Prep. Tips

DSA asked is very basic, standard leetcode practice is more than sufficient.

Prepare Core CS fundamentals(OOPS, DBMS, OS, CN) well and know all the technologies mentioned in your resume, and most importantly keep calm during the interviews. Practice having conversations in english if you're not comfortable in it.

Tathagata Sur	
4	Computer Science & Engineering
Name	Tathagata Sur
Department	Computer Science & Engineering
Year of Grad.	2027

Experience

Round 1: Online Assessment

The OA consisted of four sections:

- S1: Coding: 1 question on graph algorithms (e.g., Dijkstra's, Multi-Source BFS).

- S2: Verbal Aptitude: Standard verbal ability questions.
- S3: Market Analysis: Situational judgment questions.
- S4: Automata Section: 2 coding questions (Easy-Medium) on topics like HashMaps and Sliding Window.

Result: 33 students were shortlisted.

Round 2: Technical Interview 1 (Virtual)

- Duration: 40 minutes
- Topics Covered:
 - Projects: Discussion on my video downloading service project, with follow up questions on constraints like user storage space.
 - DBMS: 3-tier architecture.
 - SQL: Write a query to find the second minimum salary.
 - OOP & Java: Method overloading vs. overriding, constructors, Java internals, and the Collection Framework.

Result: 20-23 students advanced to the next round.

Round 3: Technical Interview 2 (Offline)

- Duration: 35-40 minutes
- Topics Covered:
 - DSA: In-depth questions on the internal workings of Queue, Stack, and variations of Dijkstra's algorithm (be sure to mention the pros and cons of each algo that you maybe asked)
 - Core Concepts: Java/Python internal workings, memory management(few OS concepts can come in handy here), multiple inheritance.
 - Version Control (Git): Concepts like merge, pull, clone, and the purpose of rebase.

Result: 15 students were selected for the HR round.

Round 4: HR Interview

- Key Questions:
 - Why did you choose your university (JU)? (Know your institute's NIRF ranking).
 - Why Wells Fargo?
 - What is the function of a bank?
 - Why do banks need software engineers, and why can't they be replaced by AI?
 - Code submitted in previous technical rounds.

Prep. Tips

Questions mentioned in the HR round can be asked in any of the rounds, so be prepared with them beforehand

Also check out some puzzle articles from GFG as many of my friends were asked about them(e.g. the 8 ball weighing problem)

Additional Notes

Be cool during the interview and you should be fine.

Name	Arjeesh Palai
Department	Computer Science & Engineering
Year of Grad.	2027

Experience

OA: This consisted of 3 sections.

Section 1 was 1 DSA question and the time was 60 mins. The question I received was a multi-source BFS problem, very similar to the LeetCode problem "Safest Path in a grid". The editor was a bit problematic as pair and auto wasn't working for me even when I chose C++20. However I got a work around and was able to solve and submit the solution in time.

Section 2 was English Comprehension (12 questions 15 mins) (MCQ)

Section 3 was Business Analytics (14 questions 15 mins) (MCQ)

I studied about candlestick diagram the previous day, however I spent a lot of time in the initial questions and due to time crunch had to just guess the last 5 questions.

Section 4 was Automata (2 coding questions 45 mins). However there was nothing about automata. Both the questions were easier than LeetCode easy.

The shortlist came the next day at 8:00 pm.

Interview Rounds were scheduled the following day, starting from 10 am.

My resume was fully based on AI and ML (1 international research paper publication, 1 research internship in ISI, Kolkata and 4 personal projects based on NLP, Deep Learning). So I did a quick revision of all ML algorithms, revised the notes of SKS sir for OOPs in cpp and C++ for Java, went through my personal projects and practiced an introduction along with some questions that could be asked to show that one is interested in the role and company.

Interview Round 1: It was a 20 to 25 min interview mainly based on introduction, some very basic dsa questions (too basic like stacks and queues, arrays and linkedlists). Difference in oops in cpp and java and why java is preferred. Then the interviewer asked about my projects, what could be improved, and gave a scenario based on the application of the project.

Interview Round 2: It was a 45 min round. The interviewer asked basic DSA questions like writing the code of Dijkstra, quick sort, some question about stacks and heaps. Then he proceeded to question me on OOPs vptr, vtable, memory overhead stack that the destructor uses. If one has paid attention to SKS's classes or have gone through the recorded lectures well then it won't be a problem. Following that some basic DBMS questions were asked (ACID, simple sql queries, non relational db like mongodb and if I had any project). Then asked me about Agentic AI and other stuff related to AI.

HR Round: This was conducted the next day. Study the statistics in WF website and be confident with what you say.

Prep. Tips

One must have excellent communication skills and should actively participate and ask questions in all the interview rounds.

Additional Notes

If your resume fits well with the JD then you have an edge over others.

✓ **Selected**

Name	Advay Dhar
Department	Computer Science & Engineering
Year of Grad.	2027

Experience

Note of warning: WF most likely came to the campus with a mass hiring intent beforehand, so the interview process was a lot more easier. They wanted ML/AI people this time around, which implies that DSA was not given much priority.

Round 1: OA : Break up: DSA question, with 1 Leetcode medium. English, "Business Analytics" but well thats just a name, it mostly had chill mental ability questions, they told everything you needed to know to solve it, but pls solve quick. Another 2 DSA questions, Leetcode easy, 45 mins time.

Round2: Online Interview: Focus on Resume, mostly basic stuff and cross questioning. If you have web dev projects, be prepared to write pseudocode for that. Just a basic DSA question, had to write bubble sort :D Try to think outside the box in dev questions, think of the different ways you can implement your skills in the given problem.

Round3: Offline Interview: Interviewer got very interested about my AI experience, asked me lots of basics like attention and transformer architecture. The interviewer really wanted to ask about Computer Networks, was absolutely devastated and heartbroken that we hadn't studied it yet. He asked me to write Dijkstra, wrote halfway and he declared "wouldn't work" even though I was 100% sure that I was doing it correctly, from the min-heap and stuff. Was thinking of proving that it would indeed work, but I noticed he didn't seem to give a crap about whether I could write it or not. Asked me what a min-heap was and asked me TC of inserting a node in a balanced binary tree (bruh, didn't even ask me to rebalance the tree). Then it looked like he couldn't take it any more and asked me a Networks problem. Thankfully it was just naming the 7 layers in the OSI model. Asked me a couple of Resume oriented problems.

Round 4: HR: Mostly formality, just chitchat, asked me a couple of questions about whether I knew about wells fargo. Asked me about my Hobbies, family background and so on. Everyone who went to HR was selected (whee).

Prep. Tips

Just know what you have done on your resume. Do a bit of DSA. Again word of caution, be absolutely prepared to solve DP and all the usual BS. Please, please know whatever technologies you are using. If you are using React, know how it work, and why you are using it. If you are using ML-AI, know what you are using, how its working.

Additional Notes

- 1) Interview process is incredibly long, might take even 7 to 8 hours.
- 2) Keep calm, keep talking. KNOW HOW TO SPEAK WELL IN ENGLISH. Don't get stunlocked. If you don't know the answer, make calculated guesses, and explain your guessing scheme. Don't be afraid of writing brute force solutions if you cant remember the optimal one.
- 3) DO NOT LIE ON YOUR RESUME.
- 4) Try to know atleast basics of computer fundamentals.
- 5) Spamming Megaknight reduces your IQ by 0.01% daily.
- 6) Listening to Fukashigi no Carte increases your IQ by 0.2% (can be triggered once a week)
- 9) Watching anime increases your IQ and motivation by 20%.

✓ **Selected**

Name	Rahul Pandey
Department	Information Technology
Year of Grad.	2027

Experience

1. **Google Form (11/08)** - CGPA ≥ 7.5 & No Active Backlogs

2. **Assessment (16/08)** - Offline at TEQUIP, on your own laptop on SHL platform (they gave us instructions to install a specific browser for the test on spot). 4 sections -

1. Coding (1q, 60 mins) - This question was a bit vague, moreover there was only 1 sample TC and no explanation. You are given an integer n and n rectangular pieces of length l_i and width w_i . There is a machine that cuts a piece only if its length and width are $\geq$ the length and width of the previous piece. You are allowed to reorder the pieces. What is the minimum number of iterations in which you can cut all pieces? (The question was much vaguer, this is my interpretation - passed 2/2 TCs so I assume it's correct) My approach - sort the pieces in increasing order of length and then use 2 loops to cut all pieces. The inner loop represents one iteration, maintaining a `prevLength` and `prevWidth` to ensure that I only cut valid pieces. The number of iterations of the outer loop gives you the answer.

2. English MCQs (12q, 15 mins) - Fill in the blanks with a suitable word, Replace the highlighted phrase with a grammatically correct phrase, Read a passage and answer questions based on the passage.

3. Business Aptitude MCQs (14q, 25 mins) - Some questions based on Venn Diagram/cardinality of 3 overlapping sets wala formula. Data Interpretation questions - Candlestick, Line Graph, Pie Chart.

4. Coding (2q, 45 mins) - First was just implementation of binary exponentiation (<https://www.youtube.com/watch?v=J63JPxqmyzg>) and the second was - given space separated words, print the words that appear more than once (cin only takes one word at a time so use a while loop if using c++). My approach - use a map to store the frequencies, then iterate through the map and print the string only if its frequency is > 1 . I was able to solve both.

3. **Technical Interview 1 (18/08)** - This round was virtual via Microsoft Teams. Mostly based on my projects. Since I had a Spring Boot project, I was also asked to write a Login Controller on paper. Apart from my projects, he asked me if I could implement any one sorting algorithm to which I replied Bubble sort and he said sure, write it on a piece of paper. So I wrote the pseudo code on a piece of paper and held it up to the screen for him to review.

4. **Technical Interview 2 (18/08)** - This round was face to face. It started with a discussion on my projects but he asked some conceptual questions related to core CS too (mongo vs postgres, resource lock, etc). He asked me a puzzle, 1 simple sql query (2nd highest salary) and 1 DSA question (detect loop in linked list). Apart from this he asked me to name the 7 layers of the OSI model. He asked me whether I've used MVC architecture in React - I told him that I'd done so on the backend but not in React. He also asked me if I know about Redux and State Management - I told him I'd heard of it but hadn't used it. He told me to learn about Redux and to use the MVC pattern in React in the future.

5. **HR Interview (19/08)** - Common HR questions - Class 10, 12 marks, CGPA, family background, why wells fargo, why should we hire you, etc.

All interviewers were very friendly, they make you feel comfortable and are understanding if you're unable to answer a question - the correctness of your answer is not the only factor, they're mostly trying to understand your thought process. They give you some hints too, in order to nudge you towards the correct answer.

Prep. Tips

Of course you'll need to maintain a CGPA above 7.5 - having a higher CGPA is a plus factor in my opinion. From IT, I think everyone who got selected had a CGPA > 8.5 . Try to keep it as high as you can while simultaneously building skills outside of your curriculum (if you're from IT, aim to score high in the first year, gets harder 3rd semester onwards).

1. OA - Practice DSA. Everyone got different questions, but I don't think they were too hard. Some people got questions on DP and Graph too, but they were not too difficult. Practice a bit of aptitude (Venn Diagram/Cardinality of 3 Overlapping Sets Formula, Data Interpretation). Having a general idea of stocks and/or trading may be helpful - but I think you could deduce the answers logically too if you didn't have prior knowledge. Learning to read a Candlestick chart may also be helpful (just how is opening, closing, max, min price denoted). English was general knowledge based in my opinion - don't think preparing specifically for this would be fruitful. If you really want an edge maybe read English stories/newspapers regularly.

2. Technical Interviews - For me this was largely based on projects so if you're a dev person make sure you can explain your projects well (what does it achieve, how does it do so). Know basic DSA - Arrays, Sorting, Linked List, etc. If you're more of a DSA person than dev, they may focus a bit more on DSA - Graphs, DP, etc (nothing too hard I think). Core CS is a must in my opinion - OOPs (Java in my case), DBMS and CN. I didn't get very hard questions but at least know the basics.

3. HR Interview - In our case, this was not eliminatory, so just don't mess it up massively. Prepare generic HR questions - why Wells Fargo, why should we hire you. Apart from this it was mostly conversational - he asked me about my family, whether I was open to relocating to Bangalore/Hyderabad etc.

Try not to stress too much, believe in yourself. All the best!

Additional Notes

In general, practice a bit of quantitative aptitude too, apart from the essentials - DSA and Core CS. Also, believe in yourself - it can get extremely disheartening in the beginning when you see others getting selected while you don't. There is definitely a luck factor, all you can do is what's in your control - work hard to increase your chances, and then you just need to get lucky on 1-2 days.
